Q: What are the differences between p-th powers and n-th powers? For example, $$x^{\sqrt 2} = (x^2)^{\frac 1 2}$$ I know the above equality is true and can be verified by using exponents and logs. But what is the difference between this equality and the following one. $$x^{\sqrt 2 + \sqrt 2} = (x^2)^{\frac 1 2 + \frac 1 2}$$ Is there a difference in terms of equality or not? I checked the number systems and found that the difference in the number system are the same, but there is difference in the symbol as $+$ and $-$ and so on. A: The $+$ has been hiding in there the whole time, it is just disguised as a symbol. To see what is going on, let's work through it
