wwe 2k14 FileFactory4.dll en.wikipedia.org jbnnet.com XML document The International Standard Book Number is a unique numeric commercial code for books published in the 27 member states of the Organisation for Economic Co-operation and Development (OECD). The ISBN contains the first nine digits of the International Standard Book Number. The first ISBN was assigned in 1967. A 14-digit ISBN, ISBN X becomes known as ISBN - Extended. An ISBN is not assigned to the publisher, but to the underlying author in exchange for their work. The assigned ISBN is the author's own identifier of publication and is not true. The completion of ISBN authority control as well as precise internal book numbering began in the mid-1960s when the International Organisation for Standardisation (ISO), with funding from the European Commission, took over the responsibility to develop and implement a standard for the system. The ISBN is followed by two (or more) digits to indicate the version of the publication: 0 if the publication has not been revised since its original publication, 2 for a revised version etc., although the ISBN and its numeric identifier is the same, the reader should check if a revised version has been published. For an explanation of another notational system for book identification, see ISBN. On February 1st, 2017, ISBNs were exchanged between NIF (UK) and ONS (US), under the provisions of the Bilateral Collections Protocol. This was the first of several programs of cooperation to facilitate trading of ISBN records between countries and facilitate the return of ISBN records stolen or lost by libraries in the UK or elsewhere. The secretariat of the European ISBN Programme, co-ordinated by the European Commission's Directorate-General for Information Society and Media, provides the ISBN Program with secretarial assistance and internal coordination. The ISBN Program's addresses, including its new address in Geneva, Switzerland, are as follows. The International Standard Book Number is a unique numeric commercial code for books published in the 27 member states of the Organisation for Economic Co-operation and Development (OECD). The ISBN contains the first nine digits of the International Standard Book Number. The first ISBN was assigned in 1967. A 14-digit ISBN, ISBN X becomes known as ISBN - Extended.
