If Photoshop has an Achilles heel, it is in the way it handles multiple-image layers. In earlier versions the layer feature was very weak. You couldn't do even simple things like split a single layer in two. But even though those days are gone, you are still limited in the number of layers you can create and how you can group them. Photoshop's Content-Aware Crop tool allows you to automatically align your content and crop an image or video frame without having to use a rectangular selection or other eraser. Although the Content-Aware Crop tool is far more convenient than the eraser tools other products offer, you can use it in conjunction with other tools, to get an even more accurate crop. The service was included with a subscription to Photoshop CC, but can also be purchased as a standalone product. ON1 is not the only company trying to bring HDR and RAW editing into the realm of the available services and apps, with last year's addition of HDR editing to Lightroom , and this year's addition of HDR editing for iPhone in recent versions of IPhotoshop . However, some of ON1's offerings are unique to it, and its overall service is far more robust. Another very useful feature is that you can drop multiple photos (or folders) from Finder into a Photoshop image file, and then navigate within the Organizer to browse them. It can also do much better in its handling of duplicate names. This means that you can now include multiple copies of the same photo, stored at different sizes, in one photo album. It also builds the photo set very neatly.

How do I know what version of Photoshop I have:

On your computer, you should be able to find a folder named "Program Files (x86)", in that folder you should have a folder named "Adobe". In that folder you should have a folder named Photoshop. In that folder you should have a folder named "ImageReady" which is the version of Photoshop installed on that computer. You can find this information by visiting Google and searching for the version of Photoshop on your computer. Another option is to use the version numbers under the 'info' tab in the program. Now that you've installed Photoshop on your computer, open up Photoshop and click on the 'File' icon from the bottom menu (left). Then click on the 'Options' icon found next to the Photoshop icon (top right). Now from the 'Preferences' menu, select 'File Handling'. When the dialog box pops up, select 'Compress Preview Images Automatically' (check the box). Check the box under 'Save As: Files Are Compressed On Save' and then click OK to, well, save the changes made. Lastly, click OK to leave the dialog box.
